

Smoking During Pregnancy, South Dakota 2014*

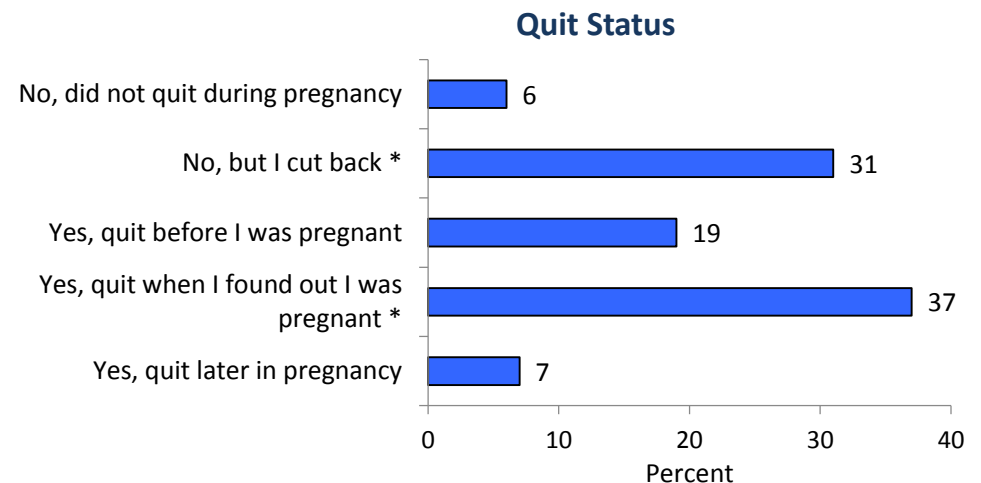

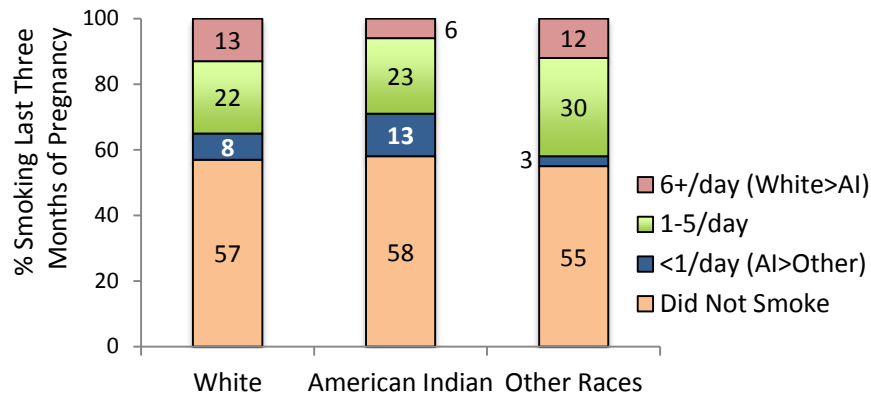

31% of South Dakota mothers smoked in the two years before pregnancy and 13% of mothers smoked the last three months of pregnancy.

The percent of mothers who smoked during the last three months of pregnancy differed by race:

- 10% of White mothers
- 27% of American Indian mothers
- 13% of mothers of other races

Among mothers who smoked during the last two years:

American Indian mothers smoked fewer cigarettes the last three months of pregnancy than White mothers:

* A higher percent of White mothers were more likely to cut back (35%), while American Indian mothers were more likely to quit when they found out they were pregnant (45%).

98% of South Dakota mothers reported that no one is allowed to smoke anywhere inside their home, but this differed by race:

- 99% of White mothers
- 90% of American Indian mothers
- 94% of mothers of other races

*Data from 2014 South Dakota PRAMS-like Survey and were weighted to provide statewide estimates. For full report: <http://doh.sd.gov/documents/statistics/2014-SD-PRAMS.pdf>
